Operation Manual

Operations and Maintenance Methods

Important Notice

For Users in Europe

The CE marking is a mandatory European marking for certain product groups to indicate conformity with the essential health and safety requirements set out in European Directives.

By affixing the CE marking, the manufacturer, his authorized

representative, or the person placing the product on the market or putting it into service ensures that the item meets all the essential requirements of all applicable EU directives and that the applicable conformity assessment procedures have been applied.

For Users in the United States

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications.

Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

This system (including the housing and safety device) is a Class 2 laser product.

Laser specifications of this system (including the housing)

Wavelength: 655 nm, maximum output: 1 mW or less, pulse duration: 3 μ s

- Complies with IEC 60825-1 Edition 3.0 (2014-05-15). Complies with FDA performance standards for laser products except for deviations pursuant to Laser notice No.56 dated May 8, 2019.

CAUTION

Use of controls or adjustments or performance of procedures other than those specified herein may result in radiation exposure.

Microsoft® and Windows® are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.

VerteLith™ is trademark of MUTOH INDUSTRIES LTD.

Company names and product names that appear in this Guide are registered trademarks or trademarks of the respective companies.

-
- Unauthorized copying or duplication of the whole or part of the contents of this Guide is prohibited.
 - Every care has been taken in writing the contents of this Guide, but please contact MUTOH or the dealer you purchased the product from if you find any unclear, erroneous or otherwise unsatisfactory content in the Guide.
 - Please be aware that MUTOH will not be liable in any way for failures or accidents that result from handling or operating the printer according to any procedures other than those set forth in this Guide.

Safety Precautions

Symbols

In this document, the following symbols are used for the instructions that must be followed to avoid risk of harm to human health or damage to the property.

Please read and understand the meaning of each symbol and ensure the proper use of the printer.

■ Warnings and cautions

 Warning	Failure to follow the instructions could result in serious injury or death.
 Caution	Failure to follow the instructions could result in minor injury or damage to the product.

■ Actions that must be avoided or instructions that must be followed

	Indicates an action that must be avoided. A black symbol in the sign indicates the prohibited action.
	Indicates an important instruction that must be followed. A symbol in the sign indicates the instruction must be followed.

■ Other symbols

 Important !	Provides information that require special attention or should be followed.
 Note	Provides supplemental or reference information.
	Indicates the link to the reference section.

Note

For the name of each part marked with warning or caution symbols, see "Before Use" on the XPJ-1682UR operation manual.

Safety Precautions

Electrical shock hazard / Fire hazard

 **Warning**

	<p>Do not install this product in a location with high humidity and dust. This could result in an electrical shock or fire.</p>		<p>Make sure to use a designated power socket.</p>
	<p>Do not use a damaged power cord. This could result in an electrical shock or fire.</p>		<p>Plug the power cord into the wall outlet. Do not use power strips. This could result in fire.</p>
	<p>Do not connect or disconnect the power plug with wet hands. This could result in an electrical shock.</p>		<p>Plug the power cords into the wall outlet that has the earth connection and make sure to connect the earth. If the earth is not connected, an electrical shock or fire may occur.</p>
	<p>Do not connect an earth wire to the following places:</p> <ul style="list-style-type: none"> • Gas pipe It has potential risks of fire and explosion. • Earth wire of telephone cables or lighting rods Large current may flow when the lightning strikes. • Water pipe or faucet It may not work properly if a plastic pipe is connected to the pipe. 		<p>Make sure to connect an earth wire to the earth connection that meets the following requirements:</p> <ul style="list-style-type: none"> • Earth terminal of power socket. • An earth wire with a copper plate which is buried at 650 mm or more in the ground.
	<p>Be sure to use the designated power cords. Failure to do so could result in an electrical shock or fire. For the designated power cord, please contact your local MUTOH dealer.</p> <ul style="list-style-type: none"> • The power cord should have the protective ground terminal and make sure to plug in securely. • Use the power cords which meet the safety standard, voltage and plug shape of the country to use this product. 		
	<p>Do not insert or drop metal or flammable objects into the printer through openings such as vent. This could result in an electrical shock or fire.</p>		<p>Do not block the vent on the product with cloth or other materials. If covered, the inside the product gets hot, resulting in fire.</p>

For Safe Use

Before Use

Basic Operations

Maintenance

When problems occur

Appendix

Safety Precautions

	<p>Never open the covers securing with screws. This could result in an electrical shock or damage to the printer.</p>		<p>Make sure to follow the instructions on this guide to connect the power cord or cables. Failure to do so could result in fire.</p>
	<p>Ensure that no moisture enters the product. This could result in an electrical short circuit.</p>		<p>If foreign objects or liquid accidentally entered the inside the product, do not use the printer. This could result in an electrical shock or fire. Immediately power off the printer and disconnect the power plug from the outlet. Then contact the MUTOH customer support.</p>
	<p>Follow the precautions below when handling the power cord.</p> <ul style="list-style-type: none"> • Do not modify power cords. • Do not place heavy objects on power cords. • Do not bend, twist, or pull on power cords. • Do not route power cords near heating equipment. 		<p>Follow the precautions below when handling the power plug.</p> <ul style="list-style-type: none"> • Do not allow dust or foreign objects to accumulate around the power plug. • Firmly insert the power plug into the wall outlet.

Safety Precautions

Installation

Warning

	<p>Choose the location which satisfies the requirements below:</p> <ul style="list-style-type: none"> • The floor must be level. • Avoid vibration from the neighboring devices. • Low humidity and free from dust. • Less chance of temperature and humidity changes. • Avoid direct sunlight. • Avoid water. • Avoid direct air onto the printer. • Low levels of electromagnetic waves. 		<p>Keep the work area well-ventilated.</p> <p>Odor of UV ink could have adversely impact on health.</p> <p>If you experience headache, fatigue or dizziness, stop your work and immediately get to fresh air. If nausea persists, seek medical advice.</p>
	<p>Before taking out the printer from the packing box, remove the plastic sheet wrapped around the printer first.</p> <p>Failure to do so may cause slip or damage to the product.</p>		
	<p>This equipment is not suitable for use in locations where children are likely to be present.</p>		

Caution

	<p>Next to the UV-LED lamp in the printer, there may be other sources of UV light present in the working environment: sunlight or any form of artificial light. To avoid printer damage (nozzle clogs, operation faults to the maintenance station, print head damage.) caused by unintentional curing by UV light sources present in the working area, please follow these guidelines:</p> <ul style="list-style-type: none"> • Do not install the product in direct sunlight. Make sure to keep the front cover closed unless necessary to open it. • Do not remove the cover. Do not modify this product. The warranty does not cover if the product has been modified or disassembled. 		
	<p>Minimum three people are required for moving this product. When moving, keep this product level.</p>		<p>Do not tilt or turn the product upside down.</p> <p>The ink inside the printer may spill. MUTOH cannot guarantee that the printer can run properly.</p>

For Safe Use

Before Use

Basic Operations

Various Settings

Maintenance

When problems occur

Appendix

Safety Precautions

Handling

Warning

	Do not sit on or place heavy objects on the product. Failure to do so may result in injury from a fall.		Do not touch the moving parts. This may cause injury or damage to the product.
	In case you need to move the printer after ink was filled, move it slowly to avoid impact and risk of ink leakage.		

Caution

	Ultraviolet light (bluish white light) emitted from the UV inkjet printer is minimized to safe levels; however, be aware of the following points when handling the printer. <ul style="list-style-type: none">• Do not stare directly into the gap under the cover, or stare at the ultraviolet light at close range for long periods of time. This may cause eye damage.• Do not expose your skin to ultraviolet light at close range for long periods of time. This may cause skin inflammation.
    	When cleaning, follow these precautions: <ul style="list-style-type: none">• Make sure to wear protective equipment (gloves, goggles or eye protection, protective clothing, mask).• Always follow the steps to perform maintenance.• Always use a new cleaning stick and dampen it with designated maintenance cleaner. Do not use other type of maintenance cleaner. It may cause nozzle clogging.• Do not touch the tip of a cleaning stick with fingers. If finger oil gets on the stick, it will damage the print head.• Do not reuse a cleaning stick. Dust sticking to the stick will cause damage to the print head.

For Safe Use

Before Use

Basic Operations

Various Settings

Maintenance

When problems occur

Appendix

Safety Precautions

	<p>Never touch the print head nozzles when cleaning around the print head. This could damage the print head.</p>		<p>Do not touch the cleaning wiper and the print head capping station with bare hands when cleaning the wiper. If finger oil gets on this, head cleaning cannot be performed properly.</p>
	<p>Before moving this printer, always empty the waste ink tank even moving short distance. Failure to do so may result in damage to the product.</p>		<p>Do not use volatile chemicals such as thinner, benzene or alcohol for cleaning. This will damage the paint on the printer.</p>
	<p>When handling the front cover or the maintenance cover, always use the following safety precautions:</p> <ul style="list-style-type: none"> • Avoid strong airflow from a fan or an air conditioner to install this printer. If not, it may accidentally close the cover. • When opening the cover, make sure the cover does not hit anyone or anything. 		
 	<p>Make sure the print is completely cured before touching. If you are not sure, wear gloves to avoid skin or clothing contact with ink.</p>		<p>Do not attempt the following actions during ink charging:</p> <ul style="list-style-type: none"> • Power off the printer. • Disconnect the power cord. • Open the front cover or the maintenance cover. • Move the printer.

Safety Precautions

Ink and waste fluid

Warning

	The safety concerns involved with using and handling of UV curable ink and waste fluid are detailed in the Safety Data Sheets (SDS). Please carefully read these sheets before handling these liquids.
	<p>Store ink bags and waste fluids in a cool, dark place and avoid direct sunlight.</p> <p>Keep away from</p> <ul style="list-style-type: none"> • children's reach • fire and heat
	<p>Wear protective equipment (gloves, goggles or eye protection, protective mask, protective clothing) when handling ink.</p> <ul style="list-style-type: none"> • Do not touch uncured UV ink with bare hands. UV ink curing time varies depending on surface characteristics of media. Especially a print with low ink coverage needs to rest for a while (approximately one hour). When checking that it is cured, make sure to wear protective gloves. • Especially during operations where ink might contact you (e.g. handling ink or waste fluid, cleaning of print head/cap/wiper), always wear protective equipment (such as solvent-resistant gloves and goggles) to avoid contact with skin or eyes. • Two types of gloves are supplied with the printer. To avoid ink penetration, please wear rubber gloves (white) over polyethylene gloves (pink). If these gloves are not available, butyl rubber gloves are recommended. • If glove becomes contaminated with ink, replace with new ones. • If ink gets on skin, immediately wash with soap and plenty of water for 15minutes. Seek medical advice/ attention if irritation or inflammation are present. • If ink gets in eyes, flush eyes with plenty of water for 15minutes and seek medical advice/attention immediately. • If swallowed, rinse mouth immediately and do not induce vomiting. Seek medical advice/attention.
	<ul style="list-style-type: none"> • When disposing of ink, waste fluid collected from the printer, or containers and paper towels with ink adhered, be sure to follow industrial waste disposal contractors, related laws, and local regulations to dispose of them. • Waste fluid from this printer is harmful. Do not allow it to reach sewage or natural water systems. • Use a HDPE container with light blocking properties to store waste liquid. • When storing waste fluid for a long time, slightly loosen the cap on the container to allow air. Do not tightly close it. • Do not mix waste ink with any other chemical substances, not even in small amounts. When mixed with other chemicals (e.g. oxidants), heating may occur.

Precautions

1	Front cover	Open or close the cover for maintenance. Normally it is closed.
2	Printer control panel	 "Printer control panel" P. 27
3	Maintenance cover L	Open or close the cover for maintenance or replacement of consumables parts. Normally it is closed.
4	Maintenance cover R	Open or close the cover for maintenance or replacement of consumables parts. Normally it is closed.
5	UV light protective cover	This cover protects eyes from UV light.
6	Media guide	A roll media passes over the media guide.
7	Media feed lever	Push the lever to lower the pressure rollers to keep the media flat while printing. Pull it to release the media. The holddown pressure can be changed between High and Normal using this lever.
8	Waste ink tank	Collects waste fluids from the printer. Empty the tank before it becomes full.
9	Stand	This supports the main body of the printer.
10	Adjuster	This is used to adjust the height of the printer after installation.
11	Carriage	The print head is installed on the carriage.
12	Platen	Media is printed on here. It has a vacuum fan inside.
13	UV-LED lamp	This unit irradiates UV light (ultraviolet light) to cure ink.
14	Cutter	Automatically cut the media after printing.
15	Edge holder	Place it on the edge of the media to prevent media curl while printing.
16	Pressure rollers	Keep the media in place to ensure proper feeding. The holddown pressure can be individually reduced or canceled by slide lock levers on the pressure rollers.
17	Color sensor	This sensor reads the adjustment pattern and the printer automatically runs print head and bidirectional (Adjust Print) calibrations.

Arrow keys :

In the Setup menu, use these keys to select a menu or enter a value.

-  key: Scroll up the menu list.
-  key: Return to the previous menu without saving the change.
-  key: Go to the next level menu.
-  key: Scroll down the menu list.

In ready-to-print state, use these keys to feed media or perform nozzle check print or cleaning.

-  key: Feed the media backward. Long-touch to feed it with high speed.
-  key: Run a nozzle check print.
-  key: Perform a cleaning cycle.
-  key: Feed the media forward. Long-touch to feed it with high speed.

6

Power button:

Press and hold the button for more than two seconds to turn on the printer.

The small LED above the button will turn on white.

While the printer is turned on, press and hold the button for more than two seconds to turn off the printer. The LED above the button will turn off.

Note

The  symbol means standby. This printer consumes some power unless the power cord is disconnected. In this document, this state is referred to as the power being "off". The small LED above the Power button turns on when the power cord is plugged into an outlet.

- CPU: Intel (R) Core (TM) i5 or more
- Memory: 8GB minimum
- Network: Use a network port that supports Gigabit Ethernet, and an Ethernet cable that supports Category 6 Gigabit Ethernet or later.

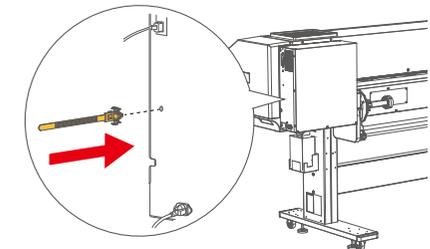

Note

- The OS support period of MUTOH software follows the Microsoft support lifecycle policies.
- When using RIP software, please also check the system requirements of your RIP software.

1 Connect the Gigabit Ethernet cable to the printer.

2 Insert the tip of the cable tie into the hole on the printer to attach it.

Precautions

Printing area

The printer always starts printing from the Origin position (print start point) with following margin on all sides of a page as shown here.

$a=5\text{ mm}^{*1}$

$b=5\text{ mm to }80\text{ mm}^{*2}$

$c=5\text{ mm}$

$d=5\text{ mm to }80\text{ mm}^{*2}$

^{*1} The margin will be 15 mm in the following cases:

- The first printing after media initialization
- When feeding the media backward by using 

The margin will be 40 mm in the following cases:

- When the Media Initial menu is set to "Top&Width"
- After cutting the media

^{*2} Margin can be changed from the Side Margin menu.

Precautions

Supported media

Media that meet the requirements below can be used on this printer.

Media size

Roll media diameter	200 mm maximum
Media core diameter	2 inches: 50 mm to 52 mm 3 inches: 75.5 mm to 79 mm
Weight	up to 30 kg
Width	500 mm to 1,625 mm
Recommended media thickness	up to 1.0 mm

Important !!

The default head height is set to "Low".
In the "Low" setting, media up to 0.3 mm thick can be loaded on the printer.

Note

For recommended media, please contact your local MUTOH dealer.

Precautions

Media handling cautions

Note the following points when handling the media.

- Use the media under an appropriate environment. The appropriate temperature and humidity for printing are as follows.

Recommended Printing Environment	Temperature 22 to 30 °C Humidity 40 to 60%, No condensation
---	--

Change rate	Temperature: No more than 2 °C per 1 hour Humidity: No more than 5% per 1 hour
--------------------	---

- Use media with no fold, scratch, tear or curl.
- The size of media can change according to changes in humidity in the printing environment. Before using media, leave media for 1 hour in the printing environment to adapt it to the environment. Performing printing without adapting media to the printing environment may cause media jams due to gaps or wrinkles in the media. Print quality is also affected.
- When using the printer in a low-humidity environment, the cut media may get stuck and may not come down. In such a case, open the front cover after the media is cut to remove the media.
- Do not use heat-sensitive media. It will deform during ink curing by UV light.
- Do not touch the print side. Moisture and oil on your hands may affect the print quality.
- Do not leave media loaded in the printer for a long time. Some media has a tendency to bend, causing media jams and degradation of print quality. Avoid using such media especially in winter or in dry conditions.
- Printing on a light reflective material may have a chance to cure the ink on the print head, causing malfunction or damage to the printer.
- Do not discard the original packaging box and plastic bag of roll media. You will use them for storing media.

Precaution on storing media after use

When storing roll media after use, follow these precautions to avoid print defects caused by cockling.

- After removing your roll media from the media flange, wind it back onto the roll properly and put it in the original plastic bag. Then store it in the package it came in.
- Avoid high temperature, high humidity, and direct sunlight when storing media.
- Keep the media dry.

Precautions

Do not power off the printer

This printer must be powered on all the time. While not in use, put it into sleep mode. Do not power off or disconnect the power cord. While in sleep mode, periodic ink circulation and head cleaning will be performed automatically to avoid ink settling, print defects or printer failure.

Please use this printer regularly

Mutoh recommends to use this printer at least once a week.

If the printer is not used for a long time, the print head could get clogged, causing damage to the printer.

Please conduct maintenance regularly

This product requires regular user maintenance.

- Run a nozzle check before printing. If the nozzles are clogged, run a head cleaning.
- Make sure to perform a daily maintenance after printing for a day. Failure to perform daily maintenance could cause print defects or printer failure.
 - ☞ [“Daily maintenance at the end of work” P.156](#)
- If you are not using the printer for an extended period*, put it into sleep mode and perform followings once a week:
 - *Extended period means one week to one month.
 - Agitate the ink in the ink cartridges (ink bags).
 - Check the ink level. If the message [Ink Low] appears, replace with a new ink cartridge (ink bag).
 - If you may not be able to perform above, follow the instruction on [“When not using the printer for a long period of time” P.201](#) to power off the printer.
 - Empty the waste ink tank when needed.
 - Clean the interior of the printer once a month.

Turning the power OFF

Important !!

This printer must be powered on all the time. While not in use, put it into sleep mode .

- Failure to do so may result in ink settling, causing print defects or printer failure.

☞ ["Sleep Mode" P.101](#)

If you are not using the printer for an extended period (maximum of one month), follow the steps "When not using the printer for a long time" to turn off the printer.

☞ ["When not using the printer for a long period of time" P.201](#)

1 Check that printing has finished and media have been removed from the printer.

2 Prepare the items required for daily maintenance.

☞ ["Step 1. Preparations for maintenance" P.157](#)

3 Press and hold the Power button for more than two seconds.

- The message [Daily Maintenance Start -> Enter] appears.

Note

- Tapping  [Cancel] key will turn off the printer without performing a daily maintenance.
- Powering off without daily maintenance could cause nozzle clogging. Normally make sure to perform a daily maintenance.

4 Tap  [Enter] key.

- The message [Please Wait] appears.
- The carriage will move to the maintenance position (left side of the printer).

Loading a roll media into the printer

Important !!

Depending on the size of media, two or more people are required for this task.

Loading a roll media into the printer

Follow these steps below to load a media into the printer.

1. Attaching flanges to the media

Items Required:

- Roll media
- Media flange: × 2

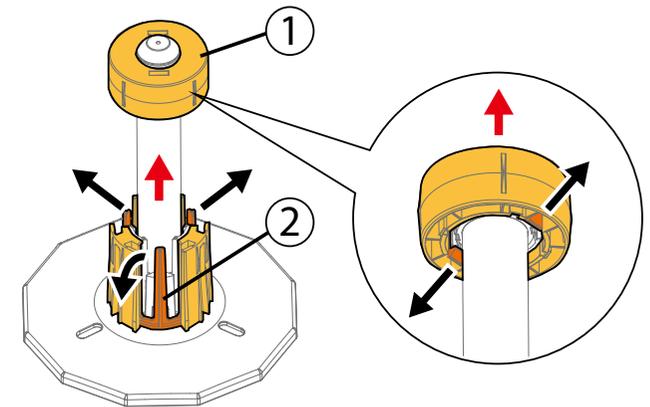

1 Replace the flange adapter depending on the size of paper core of roll media.

■ If you are using 2-inch core roll media
Remove the 3-inch adapter from the media flange.

- ① : Pull two tabs on the adapter outward, then remove it from the flange.
- ② : Pull three tabs on the adapter outward, then remove it from the flange.

Note

- If ② adaptor cannot be removed, turn the handle on the flange anti-clockwise to loosen (see Step 2), then remove it.
- If you are using 3-inch core roll media, skip this step.

■ When replacing 2-inch core roll media with 3-inch core roll media

Attach the 3-inch adapters to the media flange.

- ① : Align the tabs (x3) on the adapter with the dents on the base of flange to click into place.
- ② : Align the notches (x4) on the inside of adapter with the protrusions (x4) on the leading edge of media flange as shown to the right to attach it to the edge of the media flange.

 **Note**

If ② adapter is misaligned, it will not be properly fixed to the media flange.

2 Push the media flange (× 2) into the both ends of the media core.

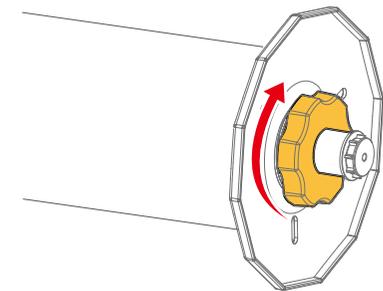

- Before inserting, twist the handle on the flange anticlockwise to unlock it.

3 Twist the handle clockwise to lock the flange.

 **Important!**

Check that the flange is firmly locked. If not, the media can be removed from the flanges while printing, affecting the print quality.

2

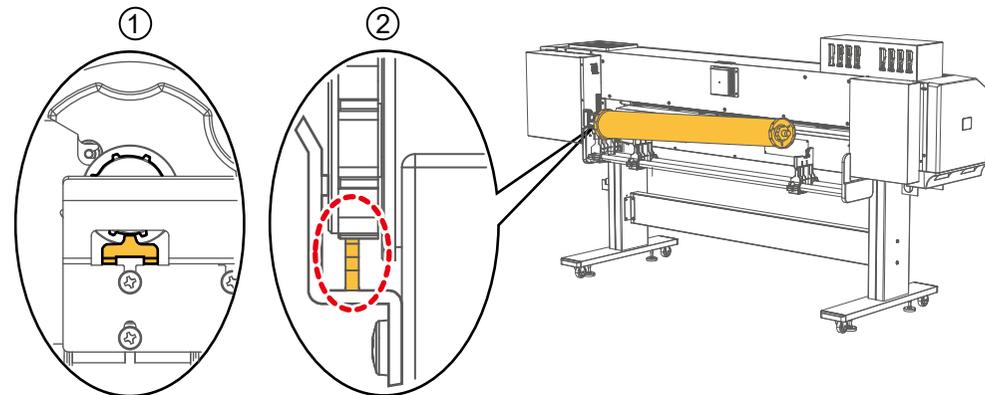

Place the roll media onto the left media holder. Carefully and gently place it on the holder.

- Place the flange between the roller shaft guide plate and the media holder as shown in the illustration.

If you set the torque, continue to check the following.

- ① : When looking from the left side, check that the protrusion on the roller shaft guide plate is fitted into between two protrusions on the flange end cap.
- ② : When looking from the rear side of the printer, check that the flange end cap is properly placed on the protrusion on the roller shaft guide plate.

Important!

- Do not drop or apply excessive impact while placing the media. This will cause damage to the part.
- When you adjust the position of the media holder (left), do not move it more than 450 mm away from the left-hand end. The printer will not be able to detect media.

Nozzle check and cleaning

Before you start daily printer operation, run a nozzle check. If nozzles are clogged, perform cleaning.

Run a nozzle check

Print the condition of the nozzle to check if all nozzles are firing ink properly.

This printer offers the following nozzle check menus:

Nozzle Check

Prints a nozzle check pattern using the print head and the nozzles selected from the "Advanced Settings: Head Select" and "Advanced Settings: Select Nozzle" menus.

 ["Nozzle check steps" P.61](#)

Nozzle CheckF

Prints a nozzle check pattern using all nozzles.

 ["Nozzle check F steps" P.62](#)

Nozzle CheckB

Some colors of nozzle check patterns are printed with the background colors.

*Displays on 6-color configuration printer only

 ["Nozzle check B steps" P.63](#)

Important !

If you run a nozzle check print immediately after initial ink charging is complete, the following symptom may appear.

- Lines are blurred
- Image is partially not printed

In such cases, go to [Maintenance3 : Cleaning] and perform [Little Charge] cleaning. Then print and check the result. If there is no improvement, leave the printer for at least one hour and then perform cleaning or [Little Charge]. Once finished, print an image again. If the problem still persists, please contact your local MUTOH dealer.

Perform a head cleaning

If nozzle clogs, perform a head cleaning.

The following cleaning modes are available in this product. Select an appropriate mode depending on the result of nozzle check print.

Short cleaning	Consumes less ink than "Normal" cleaning.
Normal cleaning	Select this mode if there are several missing lines in the nozzle check print.
Long cleaning	Consumes more ink than "Normal" cleaning. Perform "Long" cleaning if nozzle clogging persists even after "Normal" cleaning was performed.
Little Charge	Gives higher cleaning, but consumes large amount of ink. (To select this menu, go to the "Cleaning" P.124 in the maintenance menu.)
Initial Charge	Offers more powerful cleaning than "Little Charge", but consumes very large amount of ink. (To select this menu, go to the "Cleaning" P.124 in the maintenance menu.)

Important !!

When performing a "Little Charge" or "Initial Charge", please comply with the following. If cleaning is interrupted, it may consume more ink.

- Do not open the front cover and the maintenance cover.
- Do not raise pressure rollers.
- Do not remove ink cartridges (ink bags).
- Make sure to install the new ink cartridges (ink bags).

- If the problem persists, repeat normal cleaning.

Note

If missing lines persists after several attempts of "Normal" cleaning, refer to the following coping strategies.

1. Perform the "Long" cleaning. (If the problem persists, go to the next step.)
2. Perform the following cleaning. (If the problem persists, go to the next step.)
 ["Cleaning flow" P.174](#)
3. Go to Maintenance menu > Cleaning menu and perform "Little Charge" cleaning. (If the problem persists, go to the next step.)
 ["Cleaning" P.124](#)
4. Perform the soak cleaning:
 ["Soak Cleaning" P. 171](#)
5. If nozzle still clogs, you can select the nozzles that do not suffer from clogging to continue printing.
 ["Select Nozzle" P.117](#)

Calibrating your printer

The following calibration must be performed before you print for the first time.

- **“Print head calibration (“Adjust Head”)” P.67**

This printer has two print heads. This alignment will calibrate dot placement between two print heads. After performing this calibration (“Adjust Head”), you must perform print quality calibration (“Adjust Print”).

- **“Print quality calibration (“Adjust Print”)” P.71**

This calibration will adjust the dot placement in bidirectional printing.

- **“Media feed adjustment” P.77**

This adjustment will correct the media feed amount.

Print head calibration ("Adjust Head")

This printer has two print heads. This alignment allows you to check an adjustment pattern printed and calibrate dot placement position between two print heads.

"Adjust Head" has following menus:

Auto	The color sensor reads the adjustment pattern print and the printer runs automatic calibration.
Standard	Print an adjustment pattern and enter the number of the pattern that has least misalignment. This menu adjusts the dot placement position for the print mode specified in the currently selected user type. When you calibrate with this menu, select the same print mode in your RIP software.
Custom	Print an adjustment pattern and enter the number of the pattern that has least misalignment. This menu calibrates the dot placement position for all print modes. Print quality can be optimized even if the print mode selected in the RIP software and the printer are different.

Note

- If the following problem appears, try print head calibration. The print quality may improve.
 - The print quality of bidirectional printing is not good.
 - The print quality does not improve even if the "Adjust Print" calibration was performed.
 - After you perform a print head calibration, make sure to perform print quality calibration as well.
 - Misalignment may occur due to the head alignment.
-  ["Print quality calibration \("Adjust Print"\)" P.71](#)
- If you change the print mode after performing "Adjust Head" calibration from the "Standard" menu, make sure to perform "Adjust Head" calibration again.
 - If you change the print mode after performing "Adjust Head" calibration from "Custom" "Fine Pattern ALL", there is no need to perform this calibration again as it calibrates dot placement position for all print modes.
 - If you want to use the different print mode in your RIP software from the mode specified in the printer control panel, make sure to run the "Adjust Head" calibration from "Custom" to check alignment in all adjustment patterns (A,B,D,E) beforehand.
 - If performing the auto calibration does not improve print quality (banding or graininess appears), do an auto calibration again or run the "Adjust Head" calibration from "Standard" or "Custom".
 - If a roll media curls or warps, load it into the printer again.

Adjust Head : When [Auto] is selected

For details of adjustment pattern, see the menu table in Various Settings. "Adjust Head" P.123

1 Select an adjustment pattern.

- Tap key so that [ALL] appears.
- Use / key to select an adjustment pattern.
- Tap [Enter] key so that the printer begins printing.

Note

Tapping [Cancel] key while printing a pattern will cancel printing.

2 The color sensor reads the adjustment pattern print and the printer runs automatic calibration.

3 Once the calibration is finished, the message [AutoAdjust Succeeded/OK ->Enter] appears.

- When the calibration is failed, the message [AutoAdjust Failed/ OK -> Enter] appears. Tap [Enter] key to end the calibration.
- Run an [Auto] calibration again or perform [Custom] calibration.

4 Tap key to end the calibration.

Note

- **If failed in the middle of the calibration, the adjustment value for the pattern which has been successfully calibrated will be saved in the printer, but the adjustment value for the pattern which has been failed to calibrate or has not been calibrated yet will not be saved in the printer.**
- **If performing the auto calibration does not improve print quality (banding or graininess appears), run an [Auto] calibration again or perform [Custom] calibration.**
- **If a roll media curls or warps, load it into the printer again.**

Adjust Head : When [Standard] or [Custom] is selected

- Standard: If the print mode (resolution, number of passes, printing direction) selected in your RIP software is different from the one specified in the selected user type, choose the adjustment pattern that matches the print mode of your RIP software.

☞ "Adjustment pattern for each print mode" P.76

- For details of adjustment pattern, see the menu table in Various Settings. ☞ "Adjust Head" P.123

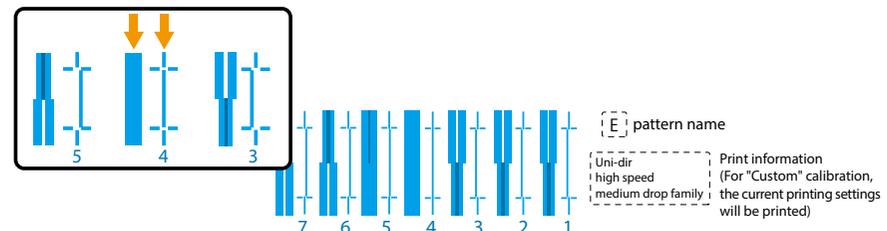

1 Print an adjustment pattern.

● When [Standard] is selected

- Tap  [Enter] key so that the printer begins printing a pattern.

● When [Custom] is selected

- Tap  key. [Custom1 Fine Pattern ALL] appears.
- Use  /  key to select an adjustment pattern.
- Tap  [Enter] key. The printer begins printing.
- Look at the print and select the pattern that looks most aligned.

Note

Tapping  [Cancel] key while printing a pattern will cancel printing.

2 Enter the number written under the most aligned pattern.

- In the above example, you will enter [Pattern E: 4].
-  /  key : Change the number.
-  [Enter] key : Confirm the change.
- If you have selected [Adjust Head2: Custom] and [Fine Pattern ALL], you will need to select and enter the number from each pattern A, B, D and E.

Print quality calibration ("Adjust Print")

This calibration adjusts dot placement position in bidirectional printing. You will need to enter the thickness of media before calibration.

Make sure to run this calibration when

- you use this product for the first time
- you changed to the different types of media

When the following symptom appears, you should run this calibration

- Image looks grainy or lines are blurry in bidirectional printing.

"Adjust Print" has following menus:

Auto	The color sensor reads the adjustment pattern print and the printer runs automatic calibration.
Standard	Print an adjustment pattern and enter the number of the pattern that looks most aligned. This menu calibrates the the dot placement position for the print mode specified in the currently selected user type. When you calibrate with this menu, please select the same print mode in your RIP software.
Custom	Print an adjustment pattern and enter the number of the pattern that looks most aligned. This menu calibrates the dot placement position for all print modes. Print quality can be optimized even if the print mode selected in the RIP software and the printer are different.

Note

- To print an adjustment pattern, more than 550 mm of printable area is required. If less than 550 mm, calibration cannot be performed.
- Changing the origin setting for CR and the left and right side margins with reference to the width of media loaded can increase or decrease the width of printable area.
- ☞ ["Media Width" P.109](#) , ["Origin" P.110](#) , ["Side Margin" P.109](#)
- If you change the print mode after performing "Adjust Print" calibration from the "Standard" menu, make sure to perform "Adjust Print" calibration again.
- If you change the print mode after performing "Adjust Print" calibration from "Custom", there is no need to perform this calibration again as it calibrates dot placement position for all print modes.
- If you want to use the different print mode in your RIP software from the mode specified in the printer control panel, make sure to run the "Adjust Print" calibration from "Custom" to check alignment in the adjustment patterns A, B, D and E beforehand.

Printhead Height

Normally choose the "Low" or "Middle" head height option depending on the thickness of your media. The closer the gap between the media and the printhead, the better the consistency of the print quality.

Important !!

Depending on the condition of a roll media or media cockling caused by the printer settings, you may get a head strike causing ink smears on the media. In such cases, try followings:

- Reduce or cancel the pressure on the individual pressure rollers holding down the area where the cockling occurs.
 - ☞ "Canceling or reducing pressure rollers individually" P.93
- After you change the head height, make sure to perform the print quality calibration.
- Do not open the front cover and change the head height during printing. Print quality cannot be guaranteed.

See the following table for the relationship between the head height and the recommended media thickness. Avoid using higher head height unless absolutely necessary, as the wider head gap will cause ink mist to adhere to the printhead nozzles, media or inside of the printer, adversely affecting print quality or leading to damage to the printer parts.

Head height	Recommended media thickness (1.0 mm or less)	Maximum media thickness that printer can feed	Description
Low	0.3 mm or below	0.3 mm	Normally use this head height.
Middle	0.3 mm to 0.8 mm	0.8 mm	Use this option for media between 0.3 mm to 0.8 mm thick or when the head strikes occur with Low setting.
High	0.8 mm to 1.3 mm	1.3 mm	Avoid using this option if a head strike does not occur with Middle setting. Because of wide distance between the print head and media, printing with "High" setting will generate ink mist, causing the following symptoms: <ul style="list-style-type: none"> • Nozzle clogging • Ink smudges due to ink mist • Ink sticking inside of the printer

Changing holddown pressure using media feed lever

If you want to change the holddown pressure applied across the entire width of media, change it using the media feed lever.

Depending on the position of the lever, you can choose the pressure between Normal and High.

- Normal: Recommended for typical roll media. To apply normal pressure, push the lever from the front side of the printer until it clicks.
- High: Recommended for heavy weight media (such as Tarpaulin). To apply high pressure, push it as far as it goes.

Important !!

Every time after you change the holddown pressure by the media feed lever, you must perform the media feed adjustment.

Canceling or reducing pressure rollers individually

When printing on thin or soft media, sometimes the media hits the print head causing ink smudge on the media. By reducing pressure or disabling the pressure rollers individually, it helps to reduce the chance of head strike. Using the slide lock lever on the individual pressure roller, the holddown pressure can be changed between Normal, Low and Cancel.

- Normal: Recommended for typical roll media. The factory default is set to Normal.
- Low: It reduces the holddown pressure.
- Cancel: It disables the pressure roller.

However, if the media feed lever is set to High, you can only choose between Normal and Cancel (even you set it to Low, the holddown pressure will not be reduced).

To cancel the individual pressure rollers, release the pressure rollers by fully pulling the media feed lever towards you as much as possible.

Media feed lever	Slide lock lever
Normal	Normal/ Low/ Cancel
High	Normal/ Cancel

Important !!

- Every time after you change the holddown pressure by individual slide lock lever, you must perform the media feed adjustment.

 ["Media feed adjustment" P.77](#)

Note

Thin or soft media is likely to cockle while printing. Wrinkles can contact the bottom side of the print head causing ink smudge on the media. Canceling the pressure rollers on both edges of media will help to prevent cockling.

Steps

1 Open the front cover.

2 Change the position of the media feed lever according to usage.

■ To cancel the individual pressure rollers

- From the front side of the printer, fully pull the media feed lever towards you to release the pressure rollers.

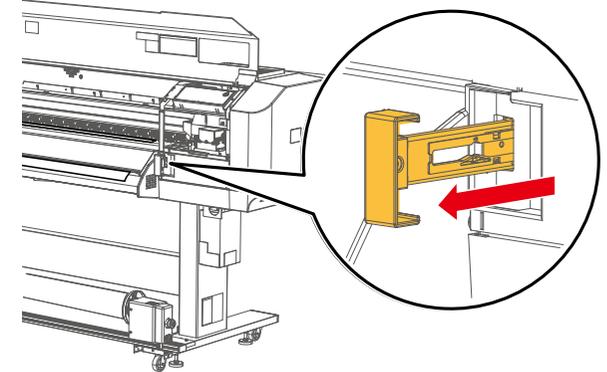

■ To set the slide lock lever to the Low position

- Set the media feed lever to the Normal position.

☞ ["Changing holddown pressure using media feed lever" P.92](#)

 **Note**

You cannot cancel the individual pressure rollers unless you release the pressure rollers by the media feed lever.

3 Push down the tab on the slider lock lever, then slide it to the front.

- To reduce pressure, slide it to front until it clicks.
- To cancel the pressure roller, fully slide it to the front until it clicks into place.

Sleep Mode

This product must be powered on all the time. While not in use, make sure to put it into sleep mode. Failure to do so may result in ink settling, causing print defects or printer failure.

While in sleep mode, the printer performs following maintenance automatically:

- scheduled automatic head cleaning
- ink circulation
- "Little Charge"

Note

The type and interval of head cleaning during sleep mode can be set from the Sleep Mode menu under "Auto Cleaning".

 [Sleep Mode menu>"Auto Cleaning" P. 134](#)

Sleep mode flow

Before putting the printer into sleep mode, follow the instructions on the printer control panel to perform a daily maintenance. For detailed procedures, please refer to the following.

 ["Daily maintenance at the end of work" P.156](#)

Select Nozzle

If nozzle clogging still persists after several attempts of cleaning, you can choose only active nozzles for printing.

1 Print a confirmation pattern and select the pattern that has no missing lines.

1. Select [Print].
2. Tap  key to print a confirmation pattern.
3. Look at the patterns and select the pattern that has not missing lines.
 - In the example of illustration below, the patterns A, B, D and E do not have nozzle clogging. (This illustration is the pattern for 4-color configuration)

Automatic nozzle checking (when optional drop sensor is installed)

This function is available when the optional drop sensor is installed in the printer.
For details of drop sensor, see "Drop Sensor Operation Manual".

Important !!

In case the printer is used in the non-recommended environment or depending on the ink being used, the following phenomenon may appear:

- The printer performs cleaning cycle each time an automatic nozzle check is run.
- Automatic nozzle checking takes more time.
- Even if an automatic nozzle checking was performed, nozzle clogging appears on the print. (*)

*If nozzle clogging persists, manually run a nozzle check and cleaning.
 ["Nozzle check and cleaning" P.60](#)

This function does not guarantee 100 percent prevention of nozzle clogging.

Note

When this function is set to [On] while there are clogged nozzles that cannot be cleared by cleaning, automatic cleaning cycle will be performed every time the printer runs an automatic nozzle check so that ink consumption will increase.

To avoid this, select the nozzle pattern that no nozzles are clogged from ["Select Nozzle" P.117](#) beforehand and then set the auto nozzle check to [On].

Automatic nozzle check flow

1. When nozzle cloggings were detected

- The printer runs an automatic cleaning to clear nozzles.
 - In case the print head has been selected in the ["Head Select" P.114](#), cleaning is performed on the selected print head only.
- Cleaning cycle to be performed is up to three times.

Basic Operations	Print settings menu
Various Settings	Test Print menu
Maintenance	Maintenance menu
When problems occur	Printer Status menu
Appendix	System Information menu
	Roll Length Manage menu
	Media Adjustment menu
	Sleep Mode menu

2. When the active nozzle area was automatically selected

In case nozzle clogging persists after three cleaning attempts, the printer automatically selects in combination of active print head and nozzle area to be able to continue printing with properly firing nozzles.

- While in print ready state, automatically selected print head (number) and nozzle pattern (alphabet), print head (number) only or nozzle pattern (alphabet) only will be displayed on the printer control panel.
- When the print head and the nozzle pattern have been selected from **“Head Select” P.114** , **“Select Nozzle” P.114** , the media width will be displayed on the panel.

```
Print Ready
PG:Low   Nozzle:1A
```

When Head 1 and Nozzle Pattern A are selected

```
Print Ready
PG:Low   Nozzle:2
```

When Head 2 is selected

```
Print Ready
PG:Low   Nozzle:B
```

When Nozzle Pattern B is selected

3. In case nozzle clogging still persists

The message [Auto Nozzle Check Nozzle Clog Present] appears.

If the print job has already been sent to the printer, the job that nozzle clogging was detected will be deleted and the rest of the print jobs will be on hold.

- Delete the job being on hold using the computer that you sent the job, then manually run a nozzle check and cleaning.
 - ☞ **“Run a nozzle check” P.60** , **“Perform a head cleaning” P.64**
- MUTOH recommends you to clear the nozzles and then print the job again.

Tapping  [Enter] key will delete the message and continue printing the job being on hold without clearing nozzles.

```

Roll Length Manage menu

This menu allows you to manage the remaining length information of roll media being loaded in the printer. Before replacing with another roll media, you can print this information on the roll media with text and a code. The next time when the roll media is loaded, the printer will read the code and manage the remaining length.

Note

• "Print" or "Simple Print" requires at least 400 mm printable width. Before printing, make sure that there is sufficient width on the media.

If printable width is less than 400 mm, the printer will not perform printing. Printable width on the media can be adjusted by changing CR origin and side margin (left and right side margin) settings.

☞ "Media Width" P.109 , "Origin" P.110 , "Side Margin" P.109

• The Roll Length Manage menu will not be displayed when the Media Initial menu is set to [Off].

☞ "Media Initial" P.109

• This Roll Length Manage menu will not be displayed when no roll media is loaded in the printer.

- "Replace the filter of UV-LED lamp" P. 192
- "Replace the emitting window glass of the UV-LED lamp" P. 194
- "Replacing and cleaning the exhaust fan filter" P. 197

How to wear the supplied gloves

Wear the rubber gloves over the polyethylene gloves (pink).

Caution

Do not touch uncured ink with bare hand.

- If glove becomes contaminated with ink, replace with new ones.
- If your clothes are contaminated with ink, immediately take it off. Wash it before reuse.
- If ink gets on skin, immediately wash with soap and plenty of water for 15 minutes. Seek medical advice/attention if irritation or inflammation are present.
- If ink gets in eyes, flush eyes with plenty of water for 15 minutes and seek medical advice/attention immediately.
- If swallowed, rinse mouth immediately and do not induce vomiting. Seek medical advice/attention.

When not using the printer for a long period of time

Moving or transporting the printer

Agitating ink

To avoid ink settling, you must agitate the ink in the ink cartridges (ink bags) in the following timing:

- Before loading a new ink cartridge (ink bag)
- When the following message appears on the control panel

Agitate W Ink

Agitate White (Wh) inks.

- This message appears every 12 hours.

Agitate KMCY Ink

Agitate Black (K), Magenta (M), Cyan (C) and Yellow (Y) inks.

- This message appears every 72 hours.

Agitate KMCYW Ink

Agitate Black (K), Magenta (M), Cyan (C), Yellow (Y) and White (Wh) inks.

- This message appears every 72 hours.

Important!

- You must agitate ink in the ink cartridges (ink bags) regularly. Failure to do so could cause ink settling, leading to print defects or printer failure.
- You should agitate the ink when the message appears. Otherwise, for 12 hours after the message appears, you will repeatedly have to wait a certain time before you can print. When 12 hours have passed, the printer will not print any data. In either case, you can bring the printer back to normal condition by agitating the ink.

Caution

If UV inks or waste fluids come in contact with skin or eyes, it may induce allergic reaction or inflammation. When you do this operation, always wear protective gloves (such as solvent-resistant gloves) and goggles to avoid contact with skin or eyes.

Replacing with a new ink

When an ink cartridge (ink bag) runs out of ink, the error message [Ink End] appears on the panel with blinking error LED and beep sound. Replace with a new ink cartridge (ink bag) and a new smart chip card immediately. The printer will not resume printing until it is replaced.

Warning

Keep ink cartridge or ink bag away from fire or heat source to avoid risk of fire.

Caution

If UV inks or waste fluids come in contact with skin or eyes, it may induce allergic reaction or inflammation. When you do this operation, always wear protective gloves (such as solvent-resistant gloves) and goggles to avoid contact with skin or eyes.

Important !!

- **Do not replace ink cartridge (ink bag) when the printer is powered off.**
Ink level cannot be detected correctly.
- **When moving an ink cartridge (ink bag) from cold place to warm place, rest it in room temperature at least 3 hours before use.**
- **If you do not have a new ink cartridge (ink bag) for replacement, leave the old one installed.**
This may cause the nozzle clogs.

Replace the adapter's plug for high-capacity ink pack adapter

When the life of the plug ends, the message will appear. Follow these steps to replace with a new plug.

- 1 When [[1] Change Plug OK -> Enter] appears, tap  [Enter] key.
 - The number in parentheses identifies the slot number.
- 2 The message [[1] Change Plug] appears.
- 3 Follow the instructions in the high-capacity ink pack adapter's operation manual to replace with a new plug.
 [High-capacity Ink Pack Adapter Operation Manual "3.3 Replacing Adapter's Plug"](#)
- 4 When you inserted the high-capacity ink pack adapter into the ink slot after replacement, the message [[1] Plug Changed? No] appears.
 - Tap  key.
- 5 The message [[1] Plug Changed? Yes] appears.
 - Tap  [Enter] key.
 - The lifetime counter of the adapter's plug will be reset.

Important !

If you do not replace the plug, do not choose "Yes". Using the high-capacity ink pack adapter without replacing the plug can cause ink leakage.

Emptying waste ink tank

In the following cases, drain waste fluids into a container to empty the waste ink tank:

- When the waste ink tank is more than half full
- When the message [Empty Waste Ink Tank then Tap Enter] appears
- When the message [Full WasteInkTank] appears

Warning message

Empty Waste Ink Tank
then Tap Enter

Appears periodically. Empty the waste ink tank.

- After emptying the tank, tap  [Enter] key so that the display returns to the previous menu.

Full WasteInkTank

The waste fluid tank has become full. Empty the waste ink tank immediately.

- Printing or other operation will stop. It will resume when you have emptied the tank.

Warning

- Keep out of direct sunlight and store the waste ink container in a cool, dark place.
- Keep away waste fluid from fire and high temperatures.
- Do not mix waste ink with any other chemical substances, not even in small amounts. When mixed with other chemicals (e.g. oxidants), heating may occur.

- Use a HDPE container with light blocking properties to store waste liquid.
- When storing for a long time, slightly loosen the cap on the container to allow air. Do not tightly close it.

Caution

- Skin or eye contact with UV curable ink may cause skin inflammation or allergic reaction.
- For this operation, be sure to wear the supplied gloves (or solvent resistant gloves) and goggles to prevent ink from contacting with your eyes or skin.

Moving or transporting the printer

Procedure

- 1 Prepare a container to collect waste fluids.

Important !!

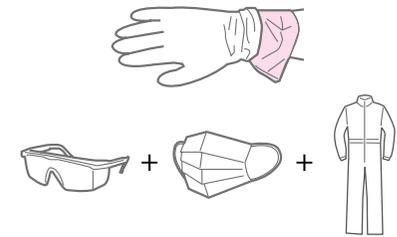

The capacity of waste fluid tank is 2,000 ml. Make sure to prepare a container that has enough capacity.

Note

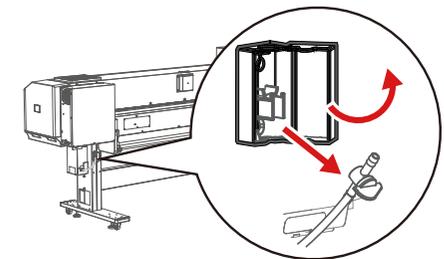

If no or small amount of waste fluid is collected in the waste ink tank, you may not be able to drain fluid out of the tank.

- 2 Cover the floor under the waste ink tank with waste paper or cloth.

- 3
 - Wear the rubber gloves over the polyethylene gloves.
 - Wear protective equipment such as goggle, protective mask, protective clothing.

- 4 Open the cover of the waste ink valve case, then take the drain tube valve out from the case.

Daily maintenance at the end of work

! Make sure to read the following sections before this task.

-  "Handling" P. 12
-  "Ink and waste fluid" P. 14

This printer requires daily maintenance. Follow these steps to perform a daily maintenance when you are done the printing for the day.

Step 1. Preparations for maintenance

Step 2. Putting the printer into Sleep mode

Step 3. Perform a daily maintenance

1. Cleaning of the UV-LED lamp on the left side
2. Cleaning of the parts around the print head
3. Cleaning of the cleaning wiper and the parts around the capping unit
4. Cleaning of the UV-LED lamp on the right side

Step 4. Ending the daily maintenance

Important!

- Even when you are printing all day long without entering to sleep mode, make sure to perform a daily maintenance once a day. Failure to do so could cause print defects or printer failure. To perform a daily maintenance without entering to sleep mode or powering off, go to [Maintenance10: Daily Maintenance].
-  "Cleaning each part of the printer" P. 174
- Make sure to perform a daily maintenance in the correct order.

Before Use

Moving or transporting the printer

Step 1. Preparations for maintenance

What you need

1 Prepare the following items for maintenance.

polyethylene gloves

rubber gloves

protective goggles

paper towel or polyester knit wiper

dropper

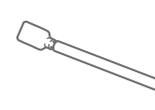

protective mask

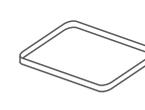

designated maintenance cleaner

plastic cup

cleaning stick

tray

scraper

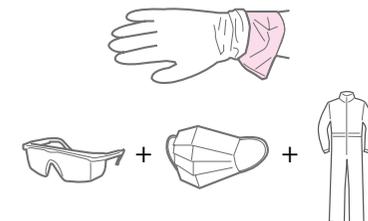

protective clothing

Important!

- Use a paper towel supplied with the printer or optional polyester knit wiper.
- Do not use a tissue. Lint or flakes on tissue may cause damage to the print head.
- Do not use non-designated maintenance cleaner.
- To purchase the optional accessories such as designated maintenance cleaner, contact your local MUTOH dealer

2 • Wear the rubber gloves over the polyethylene gloves.
• Wear protective equipment such as goggle, protective mask, protective clothing.

Step 2. Putting the printer into Sleep mode

 ["Sleep Mode" P.101](#)

- 1** Check that
 - the front cover and the maintenance covers are closed.
 - media is removed from the printer.
 - ink cartridges (ink bags) have sufficient ink.
 - the waste ink tank has enough space.

Important !!

If you are going to leave the printer in sleep mode for a long period of time, empty the waste ink tank once a week:

 ["Emptying waste ink tank" P.152](#)

- 2** Go to the "Sleep Mode" menu.
 - Tap  [Home] key so that [Menu1 Setup] appears.
 - Use  key to choose [Menu8 Sleep Mode].
 - Tap  key.

- 3** When [Sleep Mode1 Start] appears, tap  key.

- 4** When [Sleep Mode Start -> Enter] appears, tap  [Enter] key.

- 5** When [Daily Maintenance Start -> Enter] appears, tap  [Enter] key.
 - [Please Wait] appears.
 - The carriage will move to the maintenance position.

- 6** When this message appears on the control panel, start performing a daily maintenance.

 ["Step 3. Perform a daily maintenance" P. 159](#)

- Do not tap the  [Enter] key. This will exit the maintenance state.

Moving or transporting the printer

Step 3. Perform a daily maintenance

Important!

Make sure to complete this maintenance within 5 minutes while the printer is in Daily maintenance state.

1. Cleaning of the UV-LED lamp on the left side

Caution

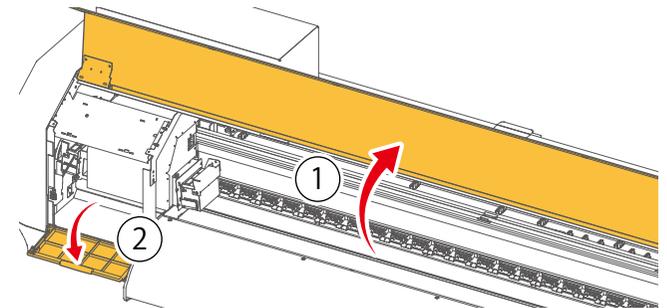

The UV-LED lamp may get hot after printing.

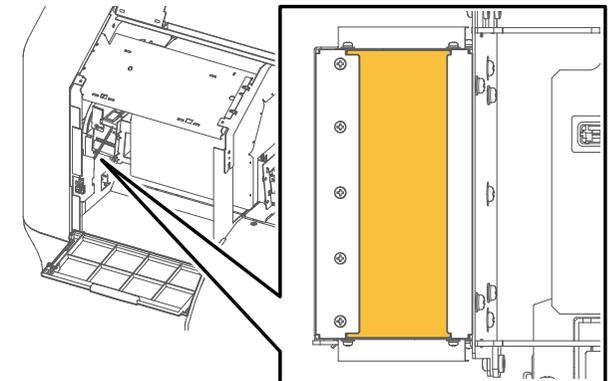

Allow the lamp to cool down for 10 minutes after printing and then start maintenance.

1 Gently open the covers in the following order:

- ① Front cover
- ② Left maintenance cover

2 Look at the glass attached on the bottom surface of the UV-LED lamp on the left side and check if ink is on the glass.

Moving or transporting the printer

3 If ink is on the glass, follow these steps to clean it.

1. Slide up the left side of the exhaust fan cover using the right side screw serves as a fulcrum.
2. Slide the glass attached on the bottom of the lamp towards the front to remove it.
3. Press the scraper on the ink deposits with a slight angle and scrape it off.
4. Use the paper towel to clean the ink scraped from the glass.
5. Put the glass back on the lamp.
6. Firmly slide it into the end and then put the exhaust fan cover back in place.

Important !

- Make sure to use the scraper supplied with the printer.
- Do not press the edge of the scraper too hard. This will cause damage to the glass
- Make sure that the emitting window glass is attached to the lamp and the exhaust fan cover is put back in place. Using your printer without them will cause damage to the lamp.

4 Next moisten the surface of print head nozzles. ☞ "2. Cleaning of the parts around the print head" P. 161

Moving or transporting the printer

2. Cleaning of the parts around the print head

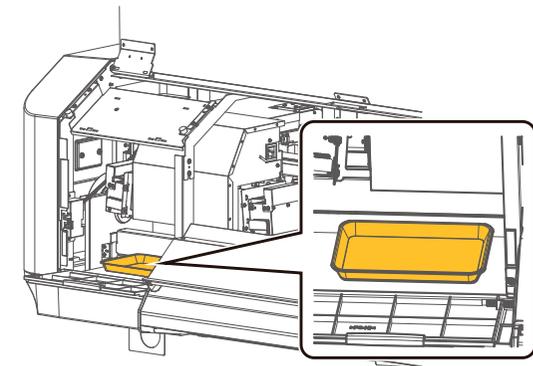

Important !

- Be sure to follow the instructions as indicated.
- Always use a new cleaning stick and designated maintenance cleaner. Reusing cleaning sticks or using non-designated cleaner may damage the print head.
- Do not touch the tip of the cleaning stick with your finger. If sebum or other contaminants get on the stick, it will damage the print head.
- To avoid making a mess inside of the printer, place the tray under the carriage.
- Do not leave the tray under the carriage. Leaving it for a long time could cause the ink to cure on the nozzle surface of the print head due to reflection of ambient light.

- 1** Soak the cleaning stick in the designated maintenance cleaner.
 1. Put a new cleaning stick in a plastic cup.
 2. Use the dropper to drop the designated maintenance cleaner on the tip of the cleaning stick. (Use about 0.5 ml)

- 2** Place the tray under the carriage.

Step 4. Ending the daily maintenance

- 1 Tap  [Enter] key on the printer control panel.
 - The printer automatically performs a cleaning.

Check UV LampR
End -> Enter

Note

If you accessed from the [Daily Maintenance] menu, the display returns to the menu selection.
 ["Daily Maintenance" P. 125](#)

- 2 Once the cleaning is complete, the message on the right will appear on the panel.
 - The printer is put into sleep mode.

Sleep Mode
End -> Enter

Note

- While in sleep mode, the LED above the Power button blinks every five seconds.
- For the types and the timer of cleaning to be performed during sleep mode, refer to the following section.
 ["Auto Cleaning" P.134](#)

- 3 End the daily maintenance.
 - Please dispose of the cleaning stick. Cleaning stick is not reusable.
 - Wipe off the maintenance cleaner on the dropper and tray with a paper towel.
 - Dispose of the maintenance cleaner in the plastic cup and dry the cup well using the paper towel.

Important!

- Check that the lid of the maintenance cleaner is shut properly and store it.
- Used cleaning stick and the maintenance cleaner left in the plastic cup are industrial waste. Dispose of them in accordance with the local regulations.

Cleaning the color sensor

Preparation:

- Polyethylene gloves, rubber gloves, protective eye wear, mask
- cleaning stick
- ethanol (more than 50% ethanol)

Important !!

- Do not push hard on the color sensor glass with cleaning stick. This will cause damage to the glass.
- Do not reuse the cleaning stick. This will cause dust to adhere to the sensor, leading to malfunction.
- The standard maintenance time is about five minutes. If it takes longer, the print head will get dried, causing the damage.

Caution

If UV inks or waste fluids come in contact with skin or eyes, it may induce allergic reaction or inflammation. When you do this cleaning, always wear protective gloves (such as solvent-resistant gloves) and goggles to avoid contact with skin or eyes.

1

Wear protective equipment.

Replacing consumable parts

In order to maintain consistent printing quality, the following parts must be replaced periodically.

Parts	When to replace
Flushing box pad	When looking from the side, the ink deposits accumulated on the flushing pad is visible through the flushing box frame. (It depends on your use frequency. Check it periodically.)  "Replacing the flushing box pad" P. 182
Cleaning wiper	Approximately every six months  "Replacing the cleaning wiper" P. 186
Cutter	<ul style="list-style-type: none">• When the cutter cannot cut media cleanly.• When the cut is fuzzy.  "Replacing Cutter" P. 189
Filter of UV-LED lamp	Approximately every one month or when the filter gets dirty with ink or dust (It depends on your use frequency. Check it periodically.)  "Replace the filter of UV-LED lamp" P. 192
Emitting window glass of UV-LED lamp	When the glass has cracks or a chip in the edge, or the dirt on the glass cannot be removed. (It depends on your use frequency. Check it periodically.)  "Replace the emitting window glass of the UV-LED lamp" P. 194
Exhaust fan filter	When the area on the filter which is normally hidden behind the filter frame is also contaminated with ink (It depends on your use frequency. Check it periodically.)  "Replacing and cleaning the exhaust fan filter" P. 197* * (Replacement or cleaning of exhaust fan filter can be done without putting the printer into CR maintenance mode.)

Replacing the flushing box pad

The flushing box is a part that collects inks spitted from the print head. Please replace the flushing box pad periodically. If used without replacing, it can cause damage to the print head.

When to replace:

- When looking from the side, the ink deposits accumulated on the flushing pad is visible through the flushing box frame. (Approximately every two months)
* It depends on your use frequency. Check it periodically.

What you need:

- Polyethylene gloves, rubber gloves, protective eye wear, mask
- Flushing box pad
- Waste paper (paper that ink does not bleed through)

Caution

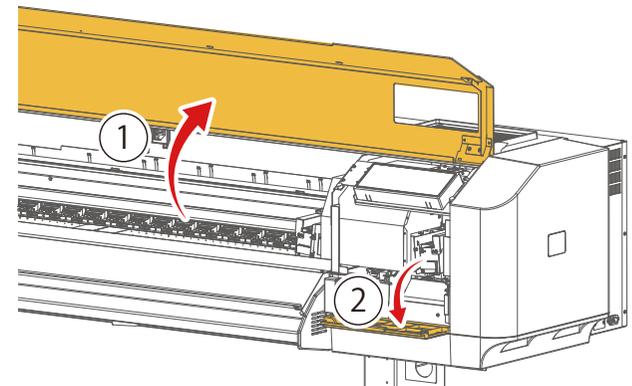

Wear the protective gloves·glasses·mask and avoid contact with your eyes or skin. Eye or skin contact may cause slight irritation or bloodshot eyes. If in eyes or on skin, immediately flush with water. If irritation is present, seek medical advice/attention immediately.

Replace the filter of UV-LED lamp

The UV-LED lamp filter protects the lamp from ink mist. Using a dirty filter will cause damage to the lamp.

Make sure you replace it regularly.

When to replace:

- Approximately once a month or when the filter gets dirty by dust or ink.(It depends on usage. Please check regularly.)

What you need

- Polyethylene gloves, rubber gloves, protective eye wear, mask
- New filter

Caution

- Wear the protective gloves glasses mask and avoid contact with your eyes or skin. Eye or skin contact may cause slight irritation or bloodshot eyes. If in eyes or on skin, immediately flush with water. If irritation is present, seek medical advice/attention immediately.

- The UV-LED lamp may get hot after printing. Allow the lamp to cool down for 10 minutes after printing and then start maintenance.

Replacement procedure

Moving or transporting the printer

Replace the emitting window glass of the UV-LED lamp

An emitting window glass is a part that protects the UV-LED lamp. Using the printer with dirty or broken glass will cause damage to the lamp or insufficient ink curing. Please replace the glass as needed.

When to replace:

- When the glass has cracks or chips, or ink sticking to the glass cannot be removed.

What you need

- Polyethylene gloves, rubber gloves, protective eye wear, mask
- New glass

Caution

- Wear the protective gloves glasses mask and avoid contact with your eyes or skin. Eye or skin contact may cause slight irritation or bloodshot eyes. If in eyes or on skin, immediately flush with water. If irritation is present, seek medical advice/attention immediately.

- The UV-LED lamp may get hot after printing. Allow the lamp to cool down for 10 minutes after printing and then start maintenance.

Moving or transporting the printer

3 Gently open the covers in the following order:

- ① Front cover
- ② Left side maintenance cover

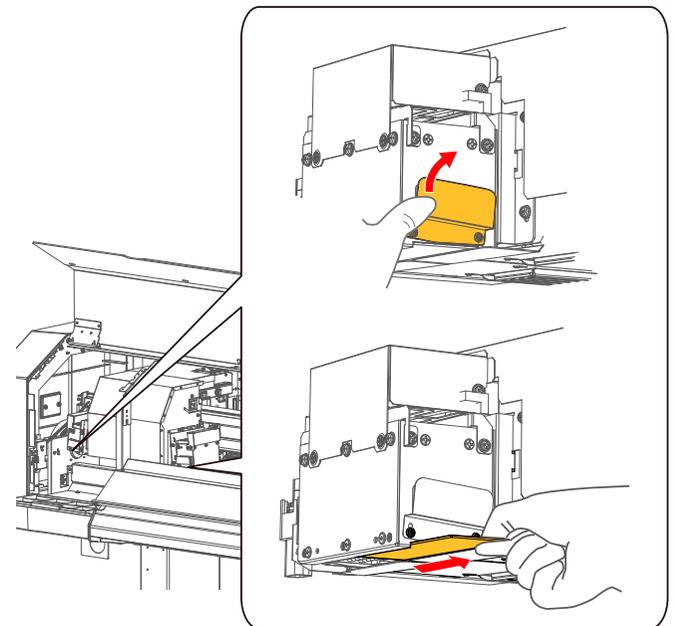

4 Check the glass and replace it if there are any cracks or chips.

1. Slide up the left side of the exhaust fan cover. The right side screw serves as a fulcrum.
2. Slide the glass attached on the bottom of the lamp towards the front to remove it.
3. Check for cracks, chips, or ink on the glass
4. Attach a new glass to the UV-LED lamp. Firmly slide it into the end and then put the exhaust fan cover back in place.

Important!

Make sure that the emitting window glass is attached to the lamp and the exhaust fan cover is put back in place. Using your printer without them will cause damage to the lamp.

Moving or transporting the printer

Replacing and cleaning the exhaust fan filter

Exhaust fan filters collect ink mist generated inside the printer. You must replace it regularly according to the replacement cycle. Using your printer without replacing this filter will affect printer performance or print quality.

When to replace or clean:

- When the area on the filter which is normally hidden behind the filter frame is also contaminated with ink (Since it differs depending on usage frequency, please check periodically.)

What you need:

- Polyethylene gloves, rubber gloves, protective eye wear, mask
- Replacement exhaust fan filter
- Paper towel or Soft cloth
- Ethanol (commercially available item: Use one with a concentration of 50% or higher.)

Caution

Wear the protective gloves·glasses·mask and avoid contact with your eyes or skin. Eye or skin contact may cause slight irritation or bloodshot eyes. If in eyes or on skin, immediately flush with water. If irritation is present, seek medical advice/attention immediately.

Replacement procedure

1 Wear protective equipment.
 [“Wearing protective equipment” P. 137](#)

2 Check that the printer is not in operation.

Moving or transporting the printer

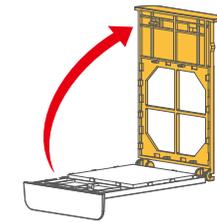

3 Remove the exhaust fan filter from the exhaust fan.

Important!

When removing the exhaust fan filter, be cautious of ink drops.

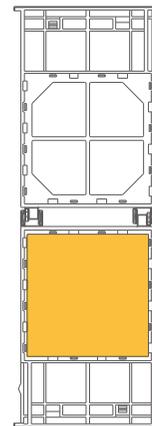

4 Open the cover on the filter.

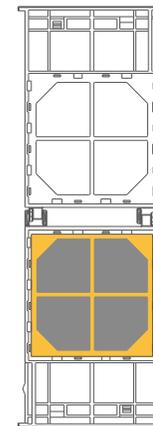

5 Check the filter to see if it needs to be changed.

- If the area on the filter which is normally hidden behind the frame of the fan filter is contaminated with ink, replace it with new one.

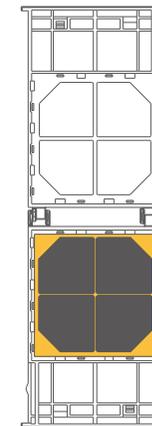

After replacement

Still good to use

Must replace now

If the filter looks dirty as shown on the left, you must replace with new one.

6

If needed, replace with a new filter.

- Remove the filter from the exhaust fan filter cover.

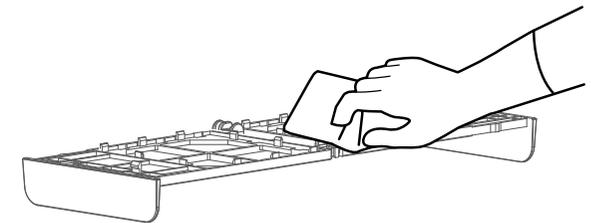

Important!

- When removing the filter, be cautious of ink drops.
- Put the used filter in a plastic bag and dispose of it according to the local regulations.

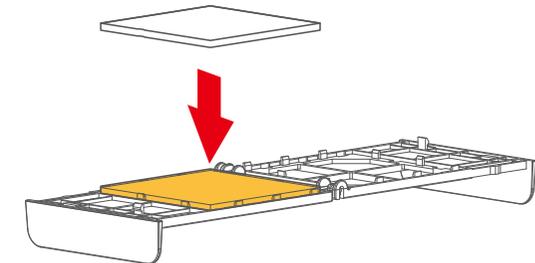

7

Using a soft cloth or a paper towel dampened with little ethanol, clean the cover to remove dirt.

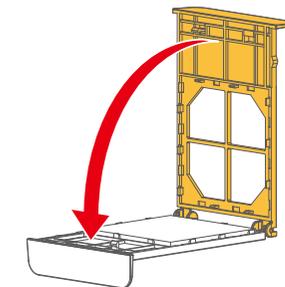

8

Attach a new filter to the cover.

9

Close the cover of the exhaust fan filter.

When not using the printer for a long period of time

If you are not using the printer for a long period of time (maximum one month), follow these steps to power off the printer.

1. Perform a daily maintenance

1 Prepare the items required for daily maintenance.

 ["Step 1. Preparations for maintenance" P. 157](#)

2 Put the printer in daily maintenance state.

 ["1.Put the printer in daily maintenance state." P. 174](#)

3 Clean the following printer parts:

- Parts that need to be cleaned by a daily maintenance

 ["Step 3. Perform a daily maintenance" P. 159](#)

- Color sensor, Inside the printer

 ["Cleaning the color sensor" P. 176,"Cleaning inside the printer" P. 178](#)

4 Once the maintenance is complete, close the front cover and maintenance cover and tap  [Enter] key.

 ["Step 4. Ending the daily maintenance" P. 168](#)

2. Flush ink out of printer

1 Go to the "Ink Discharge" menu.

- Tap  [Home] key. [Menu1 Setup] appears.
- Tap  key several times to select [Menu 3 Maintenance].
- Tap  key. [Maintenance1 Cleaning] appears.
- Tap  /  key to select [Maintenance3 Ink Discharge].

2 Tap  key

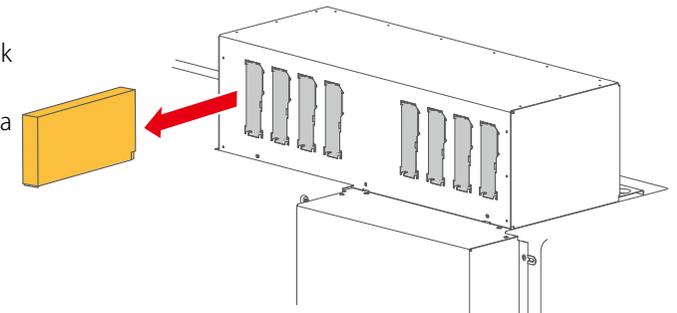

- When [Ink Discharge Start -> Enter] appears, tap  [Enter] key.

3 If the message [Empty Waste Ink Tank then Tap Enter] appears, drain waste fluids into a container.

- Tap  [Enter] key.
 ["Emptying waste ink tank" P. 152](#)

4 When [Remove Cartridges] appears, remove all the ink cartridges (or ink bags) from the ink slots.

- When [Discharging **%] appears, it begins flushing ink out of the printer.
- When [No Cart xxxxx] appears, drain waste fluids into a container to empty the waste ink tank.
 ["Emptying waste ink tank" P. 152](#)
- For ink cartridges, put them in the original packaging boxes and store in a light-shielded area.
For ink bags, after removing from the high-capacity ink pack adapters, put them in the original packaging boxes and store them with high-capacity ink pack adapters in a light-shielded area.

5 The procedure ends here.

3. Power off the printer

1 Press and hold the Power button for more than two seconds.

- The printer begins powering off.

Moving the printer

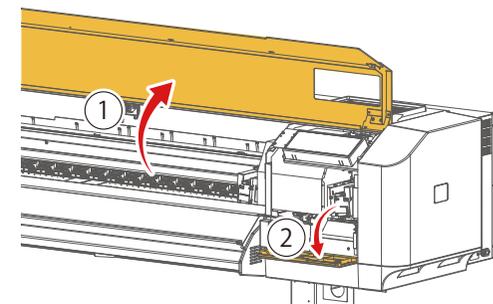

This section describes how to move the printer.

Important !!

- When moving the printer, make sure to keep it level.
- Do not tilt the product. The ink inside the printer may spill. MUTOH cannot guarantee that the printer can run properly.
- Before moving the printer, empty the waste ink tank. Failure to do so may result in damage to the product.

Preparation before moving

- 1 Make sure that the printer is turned OFF.
☞ ["Turning the power OFF" P. 46](#)
- 2 Empty the waste ink tank.
☞ ["Emptying waste ink tank" P. 152](#)
- 3 Remove all the cables including the power cord.
- 4 Gently open the covers in the following order:
 - ① Front cover
 - ② Right side maintenance cover

Initial ink charging after flushing ink out of the printer

- 1 Press and hold the Power button for more than two seconds.
 - The small LED above the button and all the keys light up.
 - Printer initialization begins.

- 2 When [Ink Charge Start -> Enter] appears, check that the waste ink tank is empty or only a small amount of fluids is collected. Then tap  [Enter] key.

- 3 When the message [Empty Waste Ink Tank then Tap Enter] appears, drain waste fluid into a container.
 - ☞ [“Emptying waste ink tank” P. 152](#)
 - After emptying the tank, tap  [Enter] key.

- 4 When [Insert Ink Cartridges] appears, agitate the ink and then insert it into each ink slot.

Important!

Be sure to use new ink cartridges (ink bags). If a used ink cartridge (ink bag) does not have enough ink, it will run out of ink during initial ink charging and will consume more ink.

- 5 Perform initial ink charging.

The procedure after installing ink

- 1 [Ink Refill * *%] appears.
 - Ink charging begins.

Caution

Do not attempt the following actions during ink charging:

- Power off the printer.
- Disconnect the power cord.
- Open the front cover.
- Open the maintenance cover.
- Release the pressure rollers.

- 2 Once the ink has been filled, the message [Media end] will appear on the panel.
 - The ink charging is complete.

Important !!

If you run a nozzle check print immediately after initial ink charging is complete, the following symptom may appear.

- Lines are blurred
- Image is partially not printed

In such cases, follow **“Cleaning” P. 124** to perform [Little Charge] cleaning. Then print and check the result.

If there is no improvement, leave the printer for at least one hour and then perform cleaning or [Little Charge]. Once finished, print an image again.

If the problem still persists, please contact your local MUTOH dealer.

Smartchip recovery

When the following message is prompted on the control panel, a smartchip error such as broken chip may have occurred in the smartchip card.

Check that the correct smartchip card is inserted and perform smartchip recovery.

This will allow you to continue to print.

To perform smartchip recovery, do one of the followings according to the message appeared.

Display	Description
[****] S/C Recog. E	The smartchip card that needs smartchip recovery may have been installed. Remove the smartchip card and insert it again. If the printer is still unable to read it, insert a new smartchip card. <ul style="list-style-type: none">• If a message [[**] Check Color OK ->Enter] appears after the smartchip card is reinserted, follow the message [[**] Check Color OK ->Enter] to operate.
[**] Check Color OK -> Enter	The smartchip card that needs smartchip recovery may have been installed. Check that the ink color of the smartchip card inserted is correct. <ul style="list-style-type: none">• In case of wrong color insertion, insert a correct smartchip card.• If color is correct, tap  [Enter] key. The printer will perform smartchip recovery and will continue to print.

Note

- [**] in the error message indicates the target ink slot.
- During smartchip recovery execution, the ink cartridge being recovered blinks in the ink status menu.

 ["Ink" P. 126](#)

Error requiring restart

An error requiring restart is displayed if a fatal operational failure such as the following occurs.

- When an error that prevents the printer from driving occurred.
- When the electrical circuit (PCB, motor, sensor, etc.) of the printer is broken.
- When a failure in the printer control program occurred.

If this error occurs, the printer will stop operation after

1. the power of drive source was automatically shut down.
2. all the LED on the printer control panel blink, and the buzzer beeps repeatedly.
3. the error message is displayed on the printer control panel and MUTOH Status Monitor.

Pressing any key on the control panel will stop the beeps. For this kind of error, operation will return to normal after removing the cause of the error and restarting the printer. If the same error occurs again, please contact your local MUTOH dealer. Be sure to tell us the code number of the error message when you contact us.

Message	Solutions
Emergency Mode : E***	A trouble that the error cannot be released has occurred. 1. Check that the part you replaced has been installed correctly. 2. Press Power button to turn the printer off. Wait for a while and press Power button again to restart the printer.
Emergency Mode : AC	The printer instantaneously shut down while starting. 1. Press Power button to turn the printer off. Wait for a while and press Power button again to restart the printer.
Emergency Mode : CPU	CPU error has occurred. 1. Press Power button to turn the printer off. Wait for a while and press Power button again to restart the printer.

Note

“***” in the error message is the error code that identifies what type of error occurred.

Troubleshooting

Troubleshooting

This section describes printer troubles that an error message is not prompted, and possible cause and solutions.

Note

- The printer status and error information can be checked from the Printer Status tab > Status Information on MSM.
If your printer is not operating correctly, check this Status Information first.
- Make sure to use the latest version of MSM.
To check the latest available version, go to Help > Version > Check for updates on MSM.
If old version is installed in your computer, download the latest version from MUTOH Club.

Troubleshooting

The media is jammed

When the media is jammed in the printer, follow these steps to remove it.

- 1 Long press the Power button.
 - The printer begins powering off.
 - When the message [Power Off] appears on the panel, release the Power button.

- 2 Open the front cover.

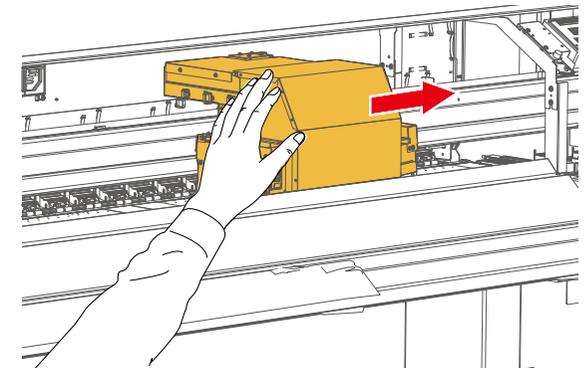

- 3 Move the carriage on the media to the right side.

Important !!

When the head height is set to Low or Middle, change it to High and then move the carriage. After moving, change the head height back to Low or Middle.

Troubleshooting

- 7 Turn the flange on the media holder to rewind the media onto the roll.

- 8 If paper dust or pieces of paper remain inside the printer, remove them.

- 9 Turn the printer ON.

- 10 Load a roll media to print a nozzle check pattern.
👉 ["Loading a roll media into the printer" P. 48](#)

- 11 Tap  key.
👉 ["Direct keys" P. 29](#)

- 12 [Start Printing? Nozzle Check F] appears, tap  [Enter] key.
 - The printer will print the nozzle check pattern F.

- 13 Check the nozzle check print to see all nozzles are clear.
 - If you find missing or thin lines on the print, go to ["Perform a head cleaning" P. 64](#).
 - If all lines are clearly printed, you can start printing.
